

## Great support with our wire rope flat woven / braided slings

**We manufacture Wire Flat Slings (plaited) from 1 Tonne SWL up to 50 Tonnes SWL. We can supply with either master rings, soft eyes or D&DP terminals at the ends.**

Total Rope Flat Slings are made from one continuous length of high tensile steel rope and are woven to a very tight weave giving the slings a longer life than normal plaited slings.

We also now produce Braided Wire Slings from 1 Tonne up to 25 Tonne SWL. We normally manufacture these slings in galvanised steel finish but we can also supply in stainless steel or plastic coated wire rope when rope protection is required.

We manufacture these slings in any length from 0.5 metres upto 10 metres. All slings have an identification tag and come complete with test certificates.
